

the **ROLEN STAR**

transducer creates a new listening experience with wrap-around sound

Beautiful music . . . from the ceiling . . . from walls . . . from every direction. With a ROLEN STAR audio transducer, the entire room becomes a speaker — surrounding you with balanced, high quality reproductions of your favorite music.

The omniphonic or “wrap around” audio effect achieved with this amazing instrument fills every inch of any living area with clear, uniform sound. For the first time, music is a natural part of your total environment.

Attach the ROLEN STAR transducer to almost any flat surface and fill your home or work area with the music you love — reproduced as you want to hear it. Our transducer provides the ideal sound system for personal listening pleasure or for commercial background music programmed to enhance work environs.

Harsh directional sound and bulky speaker cabinets are relics of the past. Install a ROLEN STAR audio transducer and discover the truly uniform, high quality music produced by this remarkably small, disc shaped device.

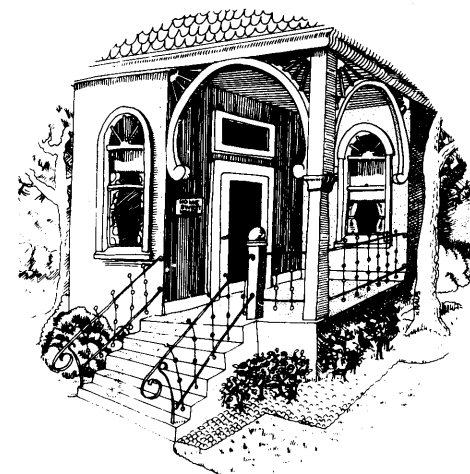

When mounted on a flat surface (a wall, ceiling or table top), the instrument transmits sound vibrations originating from any audio source to which it is connected. And, when attached to a wall dividing two rooms, it converts both areas into speakers of equal volume.

This instrument also keeps background music where it belongs — in the background, faithfully reproducing the full range and clarity of your favorite compositions. With volume properly adjusted, the unit is never irritating or a threat to conversation.

To install, simply connect the ROLEN STAR transducer to a sound source capable of delivering at least 1½ watts of power for each transducer used. Then mount the instrument on almost any structural solid and enjoy a new experience in audio entertainment.

LISTEN AND ENJOY

- faithful sound reproduction
- perfect stereo separation
- beautiful volume and tone
- no cabinets or sound box
- can be completely hidden
- corrosion free — ideal for out-of-doors

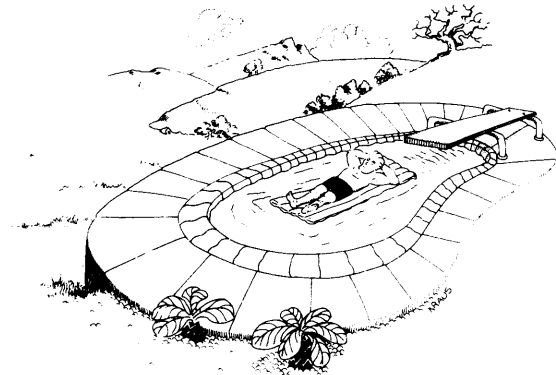

A DYNAMIC, HIDDEN SOUND SYSTEM

Since it is only 4" in diameter and 1½" in thickness and weighs about 2 pounds, the ROLEN STAR audio transducer goes virtually unnoticed when mounted on a wall or similar exposed surface. It is completely hidden from view when attached to the attic-side of a ceiling.

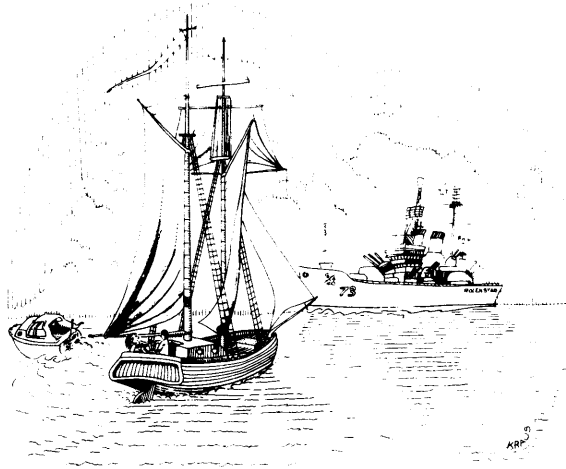

As a result, you can make beautiful music a natural part of any environment without the clutter and bother of large pieces of audio equipment.

MAKES BEAUTIFUL MUSIC A NATURAL PART OF ANY ENVIRONMENT

BLANKET YOUR HOME with music by attaching **ROLEN STAR** units to walls and ceilings and achieve true stereophonic separation. These devices are highly efficient when mounted on sheet rock, wood, plastic, or like surfaces.

PATIO OR POOL installation adds to the entertainment value of these recreational areas.

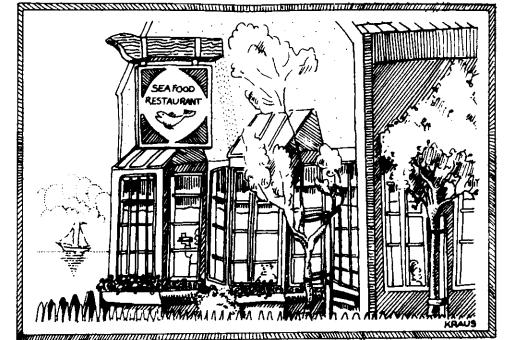

BOATING PLEASURE is greatly enhanced with a ROLEN STAR sound system. Attach our corrosion-resistant transducers inside or outside your craft and turn it into an island of distortion-free music.

VANS & CAMPERS

COMMERCIAL ESTABLISHMENTS

— restaurants, night clubs, office buildings
— that consider atmosphere essential to their business are ideally suited for a ROLEN STAR sound system. This equipment enhances the decor of any room by making mood music a natural part of the background.

Stop in today for a showroom demonstration of the ROLEN STAR audio transducer or have one of our factory-trained sales representatives arrange a trial demonstration in your home or office.

Treat yourself to a new experience in sound equipment. Bring "music in the round" to the areas where you work and play.

To arrange for a demonstration in your home or to obtain additional information on this truly innovative sound system, call or stop by —
